

Initializing Git

This file gives a quick set of instructions for setting up the Git repository.

Table of Contents:

- [README](#)
 - [Purpose](#)
 - [Structure](#)
 - [File Organization](#)

Instructions

1. Open Git Bash in the root directory for this project.
2. Run the following commands:
 1. `rm -rf .git`
 2. `git init`
3. Go to github.com
 1. Create your new repository.
4. From Git Bash run the command directed by github.com:
 1. `git remote add origin https://github.com/Dee-L/<repository name goes here>.git`
5. Use either VS Code shortcuts or GitBash commands according to the table below to finish initializing the repository:

Step	VS Code key binding	GitBash command
Add files/stage changes	<code>ctrl + g a</code>	<code>git add .</code>
Commit changes	<code>ctrl + g c</code>	<code>git commit -am '<message here>'</code>
Push changes to remote	<code>ctrl + g p</code>	<code>git push -u master</code>
